

sameer mishra - Logical ability

Alva’s logic test assesses logical ability, i.e., how efficiently one processes complex information and draws accurate conclusions from it.

The standard score is an estimation of logical ability, compared to other people in the working population.

Slightly above average

69th - 84th percentile.

Your score on the logic test is 7, which is slightly above average.

* The most common standard scores are 5 and 6. The percentile ranges for these scores are wide due to the fact that they cover a large proportion of the population.
