Overall Result Summary: sameer mishra

Deductive-logical Thinking (Ist)**What does this test measure?**

The goal of the test is to find the object that fits into the square marked with the question mark in the grid. The test thus measures your logical reasoning ability. Logical reasoning is of utmost important for certain jobs.

How to interpret your result

Your performance score has been calculated based on correct and incorrect answers. Please consider that this is only a snapshot of your performance which can be influenced by various factors. Your performance on the test can be described as follows:

It is **as easy** for you as for other participants to handle the tasks in this test successfully.

What is your processing style like?

In addition to the performance score your processing style is measured. It indicates how many questions you completed in the default time (speed) and how many of those questions you answered correctly (accuracy). These two scores are compared with the scores of other participants as well. The optimal processing style is to complete as many questions as possible, as accurately as possible.

Number of completed questions (speed): 9

Number of questions correctly answered (accuracy): 6

Your processing style can be characterised as follows:

Your completion of the test was **quite fast** and **quite accurate**, this means that you completed and answered correctly approximately as many tasks as most other participants.

Overall Result Summary: sameer mishra

Inductive-logical reasoning (clx)**What does this test measure?**

In this test the task is to find out rules and interrelations in a given pattern and to apply these rules to other patterns. Therefore, the test measures the ability to draw inductive logical conclusions (inductive logical reasoning). Focused analysis of information and data-bases, and the recognition of rules behind them, is vitally important in certain occupations.

How to interpret your result

Your performance score has been calculated based on correct and incorrect answers. Please consider that this is only a snapshot of your performance which can be influenced by various factors. Your performance on the test can be described as follows:

It is **as easy** for you as for other participants to handle the tasks in this test successfully.

What is your processing style like?

In addition to the performance score your processing style is measured. It indicates how many questions you completed in the default time (speed) and how many of those questions you answered correctly (accuracy). These two scores are compared with the scores of other participants as well. The optimal processing style is to complete as many questions as possible, as accurately as possible.

Number of completed questions (speed): 19

Number of questions correctly answered (accuracy): 18

Your processing style can be characterised as follows:

Your completion of the test was **quite fast**, this means that you completed approximately as many tasks as most other participants. At the same time you were **extremely accurate** which means that compared to other participants, you answered more tasks correctly.

Norm group: General adult population (Swedish)
